

Latte Art - Coffee Cafe

GDD 1.0

Game Summary

Become an artistic barista in coffee shops around the world!

Look and Feel:

Game is set in a cartoon stylized 3D world.

Genre:

Hyper-Casual gameplay

Dimension:

3D

Camera:

First Person, Portrait Orientation

Target Customer:

Female players from 13-65 years old.

Target Platforms:

Mobile devices (Android and iOS) - Tablets and Phones

Single Player:

Yes

Multiplayer:

No

Game Modes: (2)

Level Mode & Free Play Mode

Business Model:

Free to Play, IAP & Ads

Languages:

Native: (English)

Game Features

Game Mechanics

In Latte Art, players play 110 different levels by traveling around the world; making artistically made art on customer's coffee orders.

Game Goals:

Users will jump from an airplane and glide their way through speed accelerating rings till they reach a certain altitude to pull their parachute and land on the landing pad safely. First one to the landing pad wins. If a user misses the pad, they die and will be in last place.

Game Phases

There are 3 individual game phases that are played before players advance to the next level.

Customer Order Phase:

The first phase accounts for the initial ordering of the coffee art by the customer prior to the user starting the in-games drawing. This phase takes place in the home page. The user will tap start for a customer to walk up to the barista camera view (your viewpoint), and ask for their order.

Art Drawing Phase:

After the user is able to see the customer's order, the camera will rotate downwards and zoom in center the cup of coffee on the screen. In this phase, the user will draw the customer requested coffee design. The customer's design will be outlined over the coffee, so the user will know where to draw. Users will tap and drag the screen to drag the milk holder over the coffee, releasing the milk into the coffee. When the user is done with their design, they will click the "done" button to reach the final stage.

Customer Receiving Phase:

This stage is the final stage of the game phase loop. In this stage, the coffee art that was just completed is rated on a 3 star scale. Stars are given based on how close the artwork is to the

original design image. After the coffee art is rated, the camera is then repositioned to the first phase (Customer Order Phase), where the customer who ordered the design will be handed their coffee. The customer will react with a variety of different emotions once they pick up the coffee cup and will walk out of screen. Once the initial customer leaves the next customer will walk into the scene; restarting the phases again.

Gameplay:

Every 11 levels that are completed will change the environment. Once the user reaches the last environment, they return back to the first cafe. There are a total of 11 different environments:

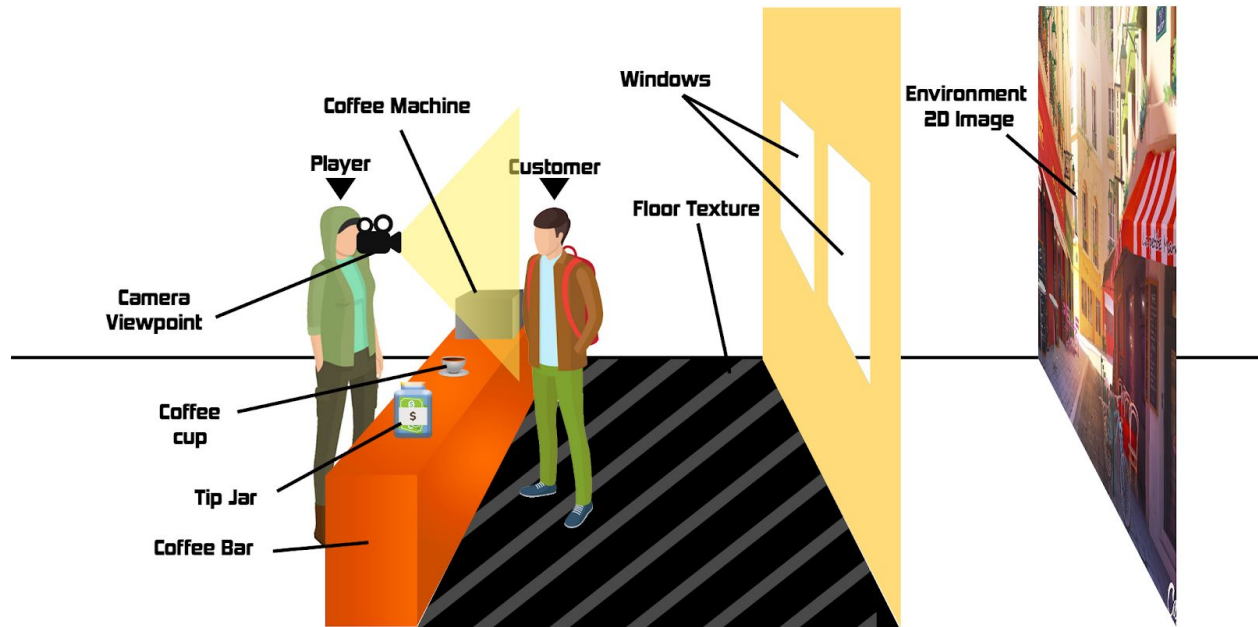

1. Basic Cafe
2. Hollywood
3. Paris
4. Swiss Alps
5. Rome
6. Carribean
7. Venis
8. New York City
9. Las Vegas
10. Kyotto
11. Rio

Each environment will not be a full 3d environment change, but only a small 3d prop change with 2d background change. Each new environment will include the following:

- 2-3 unique props to be placed inside the cafe on the coffee bar area
 - Ex. If the location is Hollywood, then the props could be a film reel, microphone or camera
- 1 2D drawn background that will be behind the windows of the cafe
 - (If your team can't do a 2D image, then they can do 3D props to create the environment)

Cafe:

The game is set inside of a cafe. The coffee cafe will be simple 3D props that make up it's design to make the user think they are inside of a coffee cafe. See the concept below that shows an angled perspective of the breakdown of the cafe:

Coffee Cup:

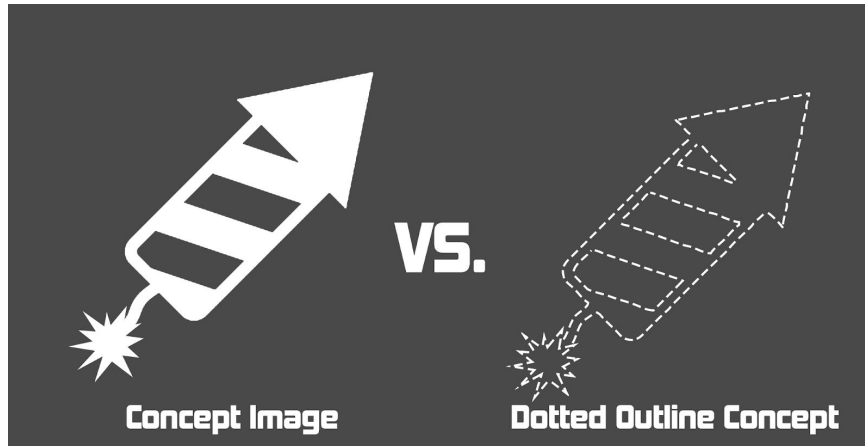

The coffee cups are cups similar to cappuccino cup size (reference here: <https://www.turbosquid.com/3d-models/dxf-cup-plate/1050407>). The coffee art that the user makes will be inside this cup. There will be one basic white cup and 9 different color/pattern cup skins that the user can unlock through soft currency.

Skins:

These skins are only cosmetic only. They are only simple color changes like in the following reference: (<https://www.turbosquid.com/3d-models/colorful-mug-set-3d-1306015>). There are 9 unlockable color skins.

Level Artwork:

The level artwork will need to be made in 2 parts. The first part is the concept image that the user will base their artwork off of; and the second part is the dotted outline of the concept image to show the user where they should pour the milk to make the art. See Concept vs. Outline example below:

**Milk Creamer:**

The milk creamer is the tool that players will use to create their artwork. This tool holds the milk liquid that is used to draw on the coffee. Users will drag their finger over the screen to control the milk creamer. Once the user drags their finger on the screen, the milk creamer will rotate down to release the milk and draw on the coffee. See reference link to show what the tool is (reference here:

<https://www.turbosquid.com/3d-models/pitcher-creamer-black-3d-model/1046465>)

Skins:

These skins are only cosmetic only. They are only simple color changes. There are 9 unlockable color skins.

Star Ratings:

After the user has completed their coffee art design and clicked the “done” button, they will be rated on a grading scale of 1 to 3 stars. The amount of stars will be determined by how well they were able to match the concept image design. The number of stars they receive per level will affect the reward cash they receive. The user can never not win a level. They will always receive 1 star as the lowest score.

Customer Characters:

Customer characters are the non-player characters who order the coffee art from the player each level. Every level should have a different character ordering. In order to reduce the work needed to be created for 110 levels, use the following character pack for the customer characters:

<https://assetstore.unity.com/packages/3d/characters/humanoids/civil-characters-pack-low-poly-154474>

We will be purchasing the items for you.

Customer Animations:

Customers will have the following animations:

- Walking (to walk in & out of shop)
- Idle
- Greeting (wave)
- Emotions (8 different emotions)
- Pick Up cup

Customer Emotions:

Characters display reactions to the coffee art that is given to them at the end of the levels. Each reaction is given based on the star rating that they receive. Each star rating will have 3 different possible reactions that are given at random. These reactions are accompanied by an animation that matches the star level (there are no animations for 1 stars, only reactions). For example if the user receives a 3 star rating from the level they completed, then the character would get excited and react in one of three different ways: "I Love It!", "Looks Delicious!", or "OMG Beautiful!". List of reactions for each rating is listed below:

3 Star Reactions:

- "Looks Delicious! (Heart Emoji)"
- "OMG its Gorgeous! (Heart Eyes Emoji)"
- "Love it! (Big Smile Emoji)"
- More will be added here

2 Star Reactions:

- "Oo La La (Smiling Emoji)"
- "Yummy yummy! (Tongue out Emoji)"
- "Your an Artist! (Art Emoji)"
- More will be added here

1 Star Reactions:

- "Okay Thanks (Normal Face Emoji)"
- "Have a Great Day! (Waving Emoji)"
- "See you tomorrow! (Thumbs Up Emoji)"
- More will be added here

Currency:

There are two different currencies in the game. Each are soft currencies that are collectable, not available for purchase, and must be earned by playing the game levels. The currencies are Cash and stars.

Cash: Cash currency is collected to unlock trips to new cafe's. It is also used to buy new cup skins. After each level, the player will receive cash based on the star rating they get from the level.

Stars: This currency is collected through the stars players get from completing levels. Are only to show the user's progress and not spendable.

Reward:

Soft Currency (Cash) is given based on the star rating they received on the level:

1. 1 star = 10 Cash
2. 2 star = 15 Cash
3. 3 star = 30 Cash

Customer Tip Rewards:

After a user finishes a level and gives the customer their coffee, the customer will show an emotion. Once the emotion is shown, the player will receive a tip in their tip jar. The tip is calculated based on the stars received as well. One stars do not get any tip from the customer.

Tips are calculated with the following formula:

- 3 Stars: Tip = (Cash Reward from Level) *15%
- 2 Stars: Tip = (Cash Reward from Level) *10%

Positive Reinforcement:

Phrases of positive meaning that encourage a user to keep playing. These will be played in-game when the user is designing the coffee with their milk. These phrases include:

- Awesome!
- Great!
- Yummy!
- Delicious!
- Looks Good!
- Divine!
- Sweet!

One of these phrases will be randomly shown while the players draw their design.

Level Progression:

In the game there are 3 progression elements; the type of cup, the type of Milk Tool and the location environment of the cafe.

1. **Coffee Cup:** Players can unlock up to 9 coffee cup skins to use in the game. Players can randomly unlock new cup skins under the shop menu by spending 150 cash. After they unlock the skin by spending cash, they equip them in the same menu. This page operates similar to the “parachute” page on Sky Divers.
2. **Milk Tool:** Players can unlock up to 9 milk tool skins in the game. They will randomly unlock new skins under the shop menu by spending 150 cash. After they unlock the skin by spending cash, they equip them in the same menu. This page operates similar to the “parachute” page on Sky Divers.
3. **Environment Location Progression:** There are 10 different environments that the player can travel to (after the basic cafe environment). Players can advance to the next environment by reaching enough cash from levels to buy a plane ticket to the location. This location ticket is represented by a trip progress bar that is at the end screen and home screen. Users must reach 300 cash currency to unlock the ticket to the next trip location. After the required cash value is met, a pop up screen is played with a map animation to represent traveling, and the new cafe elements are implemented when the user returns to the main screen. Once the highest map location is reached, the maps will just cycle back to the first map.

Controls:

Users will have one set of controls for both the Level mode and free play mode.

- All controls will be similar to other games like Ink Inc. or Icing on the Cake
- Tap and hold the screen to begin pouring the milk into the coffee
- The movements are similar to a joystick. If the user drags the screen left, then the milk holder will move left as well (same with all other directions)
- If the user moves the milk off of the coffee cup, the cup will stop pouring and return to original state
- Wherever the milk tool is, will make a highlighted area of where the estimated milk will be poured on the coffee to notify the user where they are aiming to design

Free Play Mode:

Free play mode is a separate mode that is a practice area where users can have a blank coffee cup to play with. This is not part of the level mode and does not give any rewards. Free play mode can be found under the “Play” button called the “Create” button. The game mode has the following rules:

- Blank Coffee Canvas
- Same controls as level mode

This mode is different from the Level mode because once the user hits the “done” button, the system will take an image of the coffee design and put it in a polaroid image. This image can be shared with any of the user’s social media platforms such as: Instagram, Twitter, and Facebook. This image can also be saved as a photo to the user’s phone as well.

Sharing Images:

In the game mode in-game, the user can share their designs with their social platforms of choice. When a user shares the image, it will also have a hashtag attached to it, as well as a link to download the game.

UI:

The whole game will be based on a single Unity scene to create a smooth user experience.

Splash Screen:

The splash screen has only 4 parts:

- Game Logo
- Background Static Image
- “Loading...” Text
- Loading Bar

Layout Concept:

**Main Menu:**

The main menu should be very colorful to have little barrier to gameplay with all gameplay in one scene.

- Settings Button
- No Ads Button
- Play Button
- Cups Page
- Environment Progression Page
- Player Gold Holder
- 3D Cafe Environment
- 2D Location Background Image
- Trip Progression Bar
- Cash Currency Holder
- Star Currency Holder
- Tip Jar
- Top Design Showcase Page
- Customer
- Customer Speech bubble & Design

Concept Layout:

Gameplay Screen:

Gameplay screen is also minimalistic with the following items:

- Coffee Cup
- Concept Coffee Art Design Image
- Outlined Coffee Art Design Image
- Milk Pouring Tool
- Customer Window
- Table Wood Texture
- Replay button
- Settings button
- Cash Currency Holder
- Star Currency Holder
- Done Button
- Positive Reinforcement Phrases
- Milk Aiming Destination Effect

Concept Layout Stage 1:

**Coffee Art Reward Screen:**

This screen analyzes how well the player did on replicating the customer's design and gives a rating.

- Filled Star Icon
- Empty Star Icon
- Map Progression Bar
- Confetti VFX
- No Ads button
- Next Button
- Collect 2X ad button
- Level # complete text
- Reward amount
- Concept coffee art image
- Player generated coffee art design image
- Settings button
- Cash Currency Holder
- Star Currency Holder

Concept Layout:

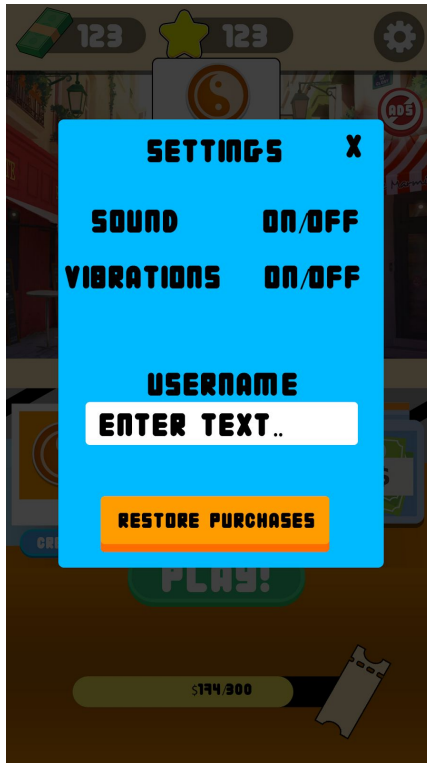

Settings:

Settings tab is an overlay on the page the user opens the page on.

- Exit Button
- On/Off Switches
- Sound Icon
- Vibration Icon
- Username input
- Restore Purchases Button

Concept Layout:

**Free Play Mode:**

This page will be the second game mode that looks very similar to the level game mode layout.

- Coffee Cup
- Milk Pouring Tool
- Table Wood Texture
- Replay button
- Settings button
- Cash Currency Holder
- Star Currency Holder
- Done Button
- Positive Reinforcement Phrases
- Milk Aiming Destination Effect

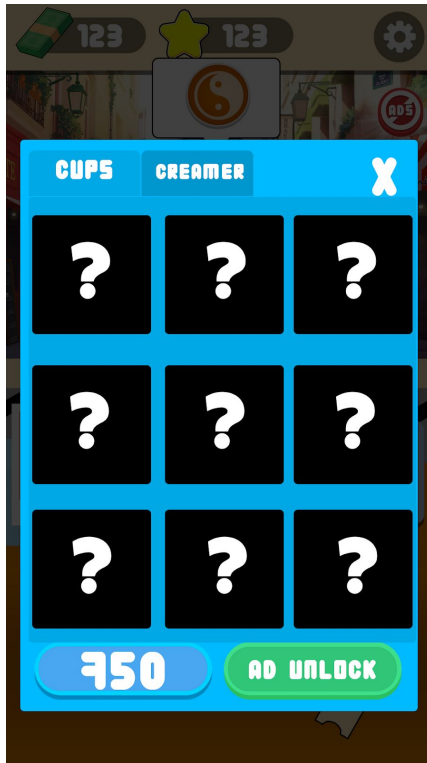

Concept Layout:

**Coffee Cups Page:**

Cups Page will be similar to other games, like the parachute page in SkyDivers. Players hit the buy button to randomly unlock a different coffee cup texture.

- Exit button
- Buy button for 150 gold
- Coffee cup icon
- Hidden coffee cup icon
- Ad unlock button
- Equip highlighter
- Selected highlighter
- Cup page
- Milk Creamer Page

Concept Layout:

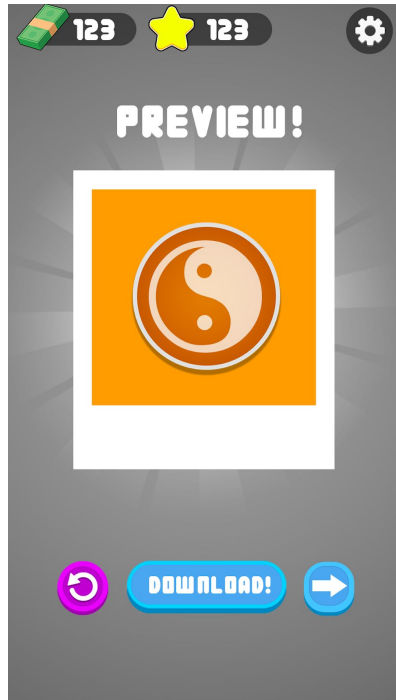

Post Page:

Page after free play mode that shows the user their user created design.

- Settings button
- Cash Currency Holder
- Star Currency Holder
- Polaroid image icon
- Next button
- Replay button
- Download button
- Home Button
- Share button

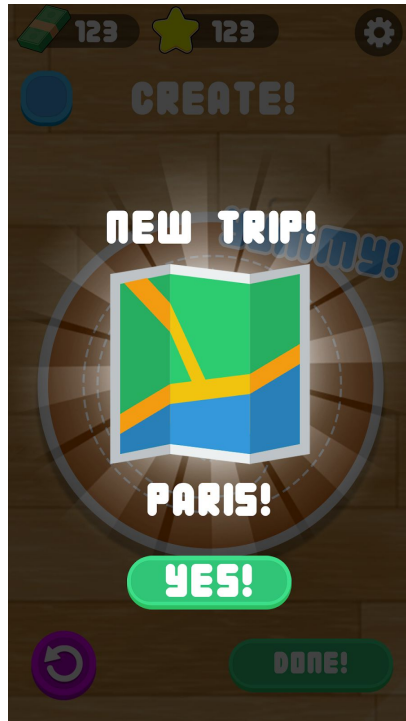

Concept Image:

**Map Unlock Page:**

This page will appear when a user reaches 300 cash currency from levels complete. This will overlay on the level complete screen.

- Map unlock
- Continue button
- Shine icons

Concept Image:

FTUE:

The first time user experience is one of the most important parts to the game. In hyper-casual titles the tutorial for the game is always short, but impactful. For this game, on login the user will start to play the tutorial level. On this level they will experience the following:

- Once user logs into the game, they will see the first customer walk up and order the coffee. The system will point to press play once the order is placed.
- Users will then be shown a simple smile face design. A finger will tell them to hold on the screen and drag along the smile to teach them how to make the design
- After the smile is drawn, they will be directed to fill in the eyes with the finger pointing to one after the other is complete.
- Once they have finished the design, they will be directed to point to the “done” button
- From here, they will receive 3 stars for their design, making the rest of the customer order finish normally and the tutorial is over

Monetization: (Ads)

This game’s monetization will be based only on ad placements and one IAP.

Ads:

Interstitial: At the end of every 2 levels

Reward Video Ads: Opt-in during doubling rewards

Reward Video Ads: Skip Level

Reward Video Ads: Open a cup/creamer skin for free

IAP:

No Ads Button: In all screens there will be a “No Ads” Button which allows the user to remove all ads from the game for an in-app purchase of \$3.99.

Haptics:

Vibrations will be played with several actions in the game:

- While pouring the milk
- Emotion that Customer shows
- Reward screen for each star
- Progress Bar filling
- When Tip is given
- Level reward affect flies currency to currency holder
- New Map unlocks

Linked here is the haptic github to utilize: <https://github.com/BenoitFreslon/Vibration>

Push Notifications:

Every 12, and 24 hours a push notification will be sent to the user reencouraging them to return to the game. Additionally, if the user collects likes from their own designs they post, then we push an update like counter notification.
